BASIC COMMUNITY PROFILE EXPLANATORY NOTES

INTRODUCTION

1. The Basic Community Profile provides 32 tables containing key census characteristics of persons, families and dwellings for the following geographic levels: CD, SLA, LGA, CED, SED, Uc/L, SSD, SD, S. Dist., Postal Area, Suburb, Section of State, State, Australia. It is based on place of enumeration.

2. Information was collected from the 1996 Census of Population and Housing.

3. Each table title in the Community Profile consists of two parts. The first part lists the variables included in the table. The second part describes the table population.

4. A glossary of terms and concepts used in the Community Profiles appears below.

5. For more information on classifications and Census concepts see the 1996 Census Dictionary (Cat No. 2901.0).

GLOSSARY

Aboriginal and/or Torres Strait Islander Origin

6. The 1996 Census was the first census to allow a person's origin to be recorded as both Aboriginal and Torres Strait Islander; prior to this only one or the other could be recorded.

Commonwealth Electoral Divisions (CEDs)

7. Some CEDs cross State and Territory boundaries. The implication of this is that State totals derived from CEDs will not equal the official State to counts. Therefore State totals will not be provided for the BCP at CED level.

Employed full-time/ part-time

8. Employed 'full-time' means that the person worked 35 hours or more in all jobs during the week prior to Census night. Employed 'part-time' means that the person worked less than 35 hours in all jobs during the week prior to Census night.

Employed full-time/ part-time (cont'd)

9. For Census purposes, people who stated they were employed, but worked zero hours in the week prior to Census night have been coded 'employed part-time'.

Family

10. A family is defined as two or more persons, one of whom is at le 15 years of age, who are related by blood, marriage (registered or d facto), adoption, step or fostering, and who are usually resident in th same household. Family tables include same sex couples.

Family income

11. Family income is the sum of the personal incomes of each resid family member aged 15 years and over. Family income is not applicable to non-family households such as group households or lo person households; or to people in non-private dwellings.

Household

12. A household is defined as a group of two or more related or unr people who usually reside in the same dwelling, who regard themse as a household, and who make common provision for food or other essentials for living; or a person living in a dwelling who makes provision for his/her own food and other essentials for living, withou combining with any other person.

13. For Census purposes, the total number of households is equal t total number of occupied private dwellings.

Household income

14. Household income is the sum of the personal incomes of each resident household member aged 15 years and over. If any househ member did not state their income, or was temporarily absent, household income is not calculated. These households fall into the 'Partial income stated' category.

Nfd

15. Nfd means 'not further defined'.

Overseas visitor

16. In the 1996 Census, overseas visitors were treated differently compared to previous censuses. In 1996, age, sex and registered marital status were the only person variables recorded for overseas whereas in previous censuses, information on all topics at the perso was recorded. For further information please contact the ABS and r a copy of Census Fact Sheet 15.

Place of enumeration

17. The Census count, based on place of enumeration, is a count of person who spent Census night in Australia. People are counted wh they are on Census night, which may not be where they usually live.

BASIC COMMUNITY PROFILE EXPLANATORY NOTES (cont'd)

Postal Area

18. A Postal Area of CD of Enumeration is formed by aggregating whole collection districts (CDs) that fall within physical boundaries of a postcode on a best fit basis. As the name implies, the data are supplied on a place of enumeration basis. This series excludes non-mappable Australia Post postcodes e.g. post office box postcodes, some postcodes which are delivery routes which are also covered by other postcodes (a situation which often occurs in rural areas) and some postcodes which, because of the application of the 'best fit' principle, do not get a CD allocated to them. A listing of alternative postal area allocations is available from ABS offices.

19. Some Postal Areas cover CDs in more than one State or Territory boundary. The implication of this is that State totals derived from Postal Areas will not equal the official State total counts. Therefore, State totals are not provided for the BCP at Postal Area level.

Table population

20. Table population is a description of what the table is counting. For example, tables containing marital status usually have a table population of persons aged 15 years and over. It appears under the table title.

Tenure type

21. In the 1996 Census, the number of categories has increased and now includes 'being purchased under a rent/buy scheme', 'being occupied rent free' and 'being occupied under a life tenure scheme'.

DATA QUALITY

22. The Census is subject to a number of inaccuracies resulting from errors by respondents or mistakes in collection or processing of the data. Some of these are overcome or 'repaired' by careful processing procedures and quality management of the processing itself. The effect of those that remain is generally slight, although it may be more important for small groups in the population. The main kinds of error to keep in mind are:

Partial non-response

23. In some cases where an answer was not provided to a question an answer was imputed or derived (often from other information on the form). In other cases a 'not stated' code was allocated.

Processing error

24. While such errors can occur in any processing system, quality management is used to continuously improve the quality of processed data, and to identify and correct data of unacceptable quality.

DATA QUALITY (cont'd)

Random Adjustment

25. Cells containing small values are randomly adjusted to avoid releasing information about particular individuals, families or house The effect of random adjustment is statistically insignificant.

Respondent error

26. Processing procedures cannot detect or repair all errors made b persons in completing the form, therefore some may remain in final

Undercount

27. Although the Census aims to count each person once, there are some people who are missed and others who are counted more tha once. A post enumeration survey is conducted soon after the Censu to measure the undercount.

Household Income (HIND) and Family Income(FINF)

28. Due to operational limitations, the family/household income imp methodology may result in an undercount of the number of families households in the $1,500 - $1,999 range and a balancing overcount $2,000 range. No other income ranges are affected. This may also a the median income estimate if the median falls in either of these ran

29. The calculation of median income is based on imputations made from the Survey of Income and Housing Costs, and as such is subjec sampling error. This is particularly evident if the median falls into th highest income range, where the quoted median is a proxy only and should be regarded with caution.

30. For explanation of these issues and the technical imputation of dollar ranges, please contact the ABS and request a copy of Census Fact Sheet 7 - Income Imputation.

Usual Residence

31. A minor processing error has been identified in the variables Us Residence Indicator 1 year ago (UAI1P) and Usual Residence Indicat years ago (UAI5P). For further information on the nature and extent error, please contact the ABS and request a copy of Census Fact She

32. Further information on data quality will be provided progressive Census Update and in the 1996 Census fact sheets and working pap
